github.byjc.dev | linkedin.byjc.dev | www.byjc.dev

Technical Focus

Production web applications, AI-assisted workflows, APIs, business integrations, payments, and reporting.

JavaScript / TypeScript | **React / Next.js** | Node.js / Express | Python / FastAPI | REST APIs
PostgreSQL / SQL Server / MongoDB | Docker / Linux | AWS / Railway / Vercel | Git / CI/CD
Stripe | Shopify | WordPress / WooCommerce

Community and Leadership

- Software engineer with **10+ years of employee-management experience**, bringing a leadership background to technical teams and client delivery.
- Active member and technical presenter, Dallas Software Developers Group, including sessions on Redux.
- Volunteer, Commit Your Code conference.

Development Experience

Craft Digital | Senior Full Stack AI Engineer | 06.2026 - Present

- Contributed to closing a **$750,000 client engagement**, translating business requirements into software for quoting, sales, and engineering.
- Built and launched a quote-to-order platform automating **12+ manual steps** for a business handling **1,600+ annual orders**.
- Replaced a lengthy intake form with a dynamic design portal, reaching **95% form completion** and reducing manual follow-up and data entry by **35%**.
- Moved a customer-reporting platform to **Railway**, switching production dashboards to PostgreSQL and removing the reporting build's dependency on AWS.

DFW Software Consulting | Founder & Lead Full Stack Developer | 01.2023 - Present

- Migrated a legacy **Microsoft SQL Server system to PostgreSQL**, resolving compatibility issues while preserving business data.
- Delivered a property-management platform replacing fragmented tools and manual work, reducing **labor costs by 15%**, including overtime savings.
- Improved a client storefront, contributing to a **200% increase in online sales within three months**.
- Manage client relationships and technical delivery, providing **code reviews and hands-on mentorship** to junior developers on production projects.

Onix Media | Full Stack Software Developer | 10.2024 - 03.2026

- Built a logistics and production-tracking platform for **20 warehouses**, replacing **pen-and-paper tracking** with centralized package tracking and profit-and-loss visibility.
- Integrated **Stripe, WordPress, and ShipStation** to automate e-commerce and fulfillment workflows.
- Managed Linux production environments, configuring NGINX and Apache for performance and uptime.
- Modernized legacy WordPress platforms with **React and TypeScript** while retaining CMS flexibility.

Development Experience Continued

iServiceWeb | Lead Intern Engineer | 03.2024 - 10.2024

- Promoted to **Lead Intern Engineer within three weeks**, taking on additional responsibility for project delivery, team support, and client-focused development.
- Developed a **Stripe-powered billing system using Node.js**, supporting subscriptions, promo codes, customer management, and payment tracking.
- Developed backend API endpoints and MongoDB models for secure billing, payment tracking, and client account workflows.
- Supported frontend and backend development across client applications, improving usability, reliability, and delivery quality.
